

UV STANDARD 801 Certification

1

TEXTILES

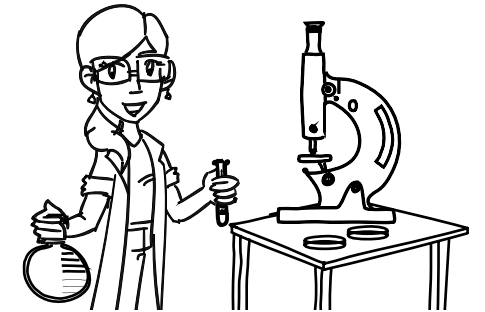

A company (manufacturer, supplier or brand) has a piece of clothing or sun shading and would like to have it tested and certified with **UV STANDARD 801** at TESTEX.

2

APPLICATION

The company applies for the certification at TESTEX. For this purpose they must fill out the **application form** with product information, sign the **declaration of conformity** and provide **samples** in all colours that need to be tested.

3

TESTING AT TESTEX

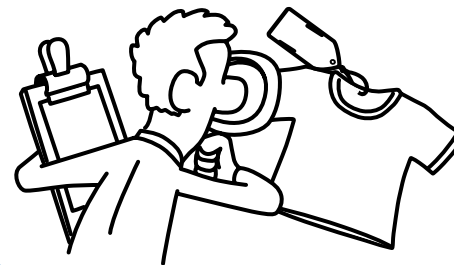

All textile samples are tested in the modern TESTEX laboratories according to the **strictest testing criteria**, i.e. the **maximum radiation intensity**, the **most sensitive skin** and **extreme conditions of use**.

6

CERTIFICATE RENEWAL

After one year of regular **certificate validity** or in case of significant product **changes** or in case of lack of conformity during a random sample check the certification can be renewed.

5

SAMPLE CHECK

In order to guarantee the **quality** of the certified products TESTEX can perform random sample checks during the certificate validity period. This aims to improve **consumer protection**.

4

CERTIFICATION

After successful testing the company receives a **report** with all assessed values as well as the right to label the certified products with the **UV STANDARD 801 label**. An optional **hang-tag** can be also used.
